

UNIVERSAL

Wax-in-water based emulsion for edges of leather soles and leather, masonite and wooden heels

UNIVERSAL

Wax-in-water based emulsion for edges of leather soles and leather, masonite and wooden heels.

Stir it before applying on the buffed surface. If you apply it on heels, you can get the best performance pre-treating the surface with our product **SOTTOFONDO** or with our **IDROTAC**.

You can:

- use it by hand with brush or sponge;
- spray it on packed soles;
- apply it with an automatic machine.

Do not exceed with large amount of product.

Let the surface dry and then smooth it with a horsehair wheel-brush. You can also use a cotton wheel-brush impregnated with abrasive or dyeing wax. Last polish it using a wool wheel-brush impregnated with carnauba wax.

A large choice of colors is available.

DESCRIPTION	Wax-in-water emulsion mixed with dyes
PHASE	Liquid
RELATIVE DENSITY (referred to water)	1,00 (transparent) 1,07 (covering)
PH	Approximately 8
USE	dyeing/finishing heels and edges of leather soles
SHELF LIFE	1 year
STORAGE	From 5 to 35°C
